With plasma display

Display your multi-level jackpot values on a big plasma TV, by using the BGT jackpot shuttle

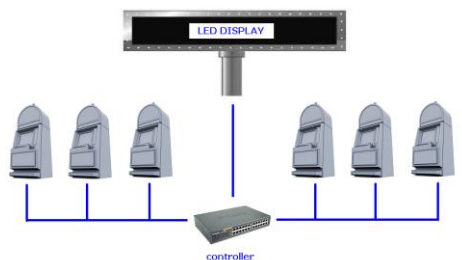

Apart from the low cost, the advantages are several:

- easy installation: it can be simply plugged on parallel to your existing controller
- multi-level jackpots can be visualised on big LCD screens
- the LCD screens can have customized background. In this case we can deliver content to change the background regularly.
- if desired, your existing LED display can be used in parallel with the plasma
- the BGT Jackpot interface has a wireless communication

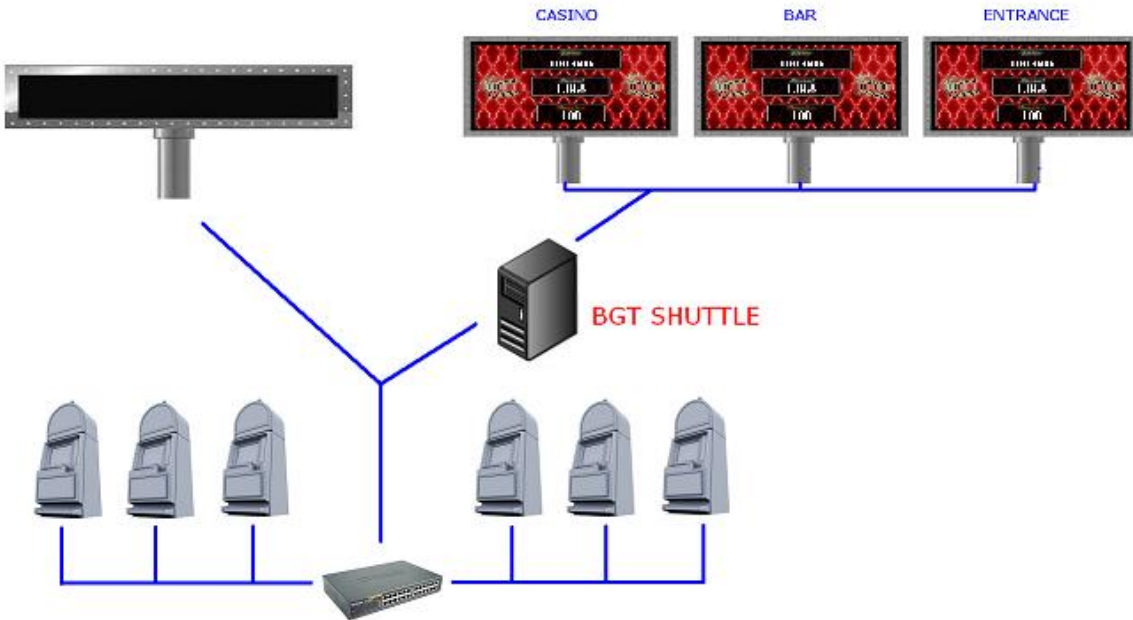

BGT Shuttle

BGT JACKPOT INTERFACE

A LED jackpot system is mostly configured as follows: All machines are linked to a controller, which sends data to an LED display

When the **BGT shuttle PC** is installed, it translates the data coming from the controller onto meters that can be shown on multiple LCD's (even wireless if desired)

King of Swing

Specifications
